Analyzing meaning: An introduction to semantics and ...

- A lexical analyzer collects characters into groups (lexemes) and assigns an internal code (a token) to each group.
- Lexemes are recognized by matching the input against patterns.
- Tokens are usually coded as integer values, but for the sake of readability, they are often referenced through named constants.

Lexical and Syntax Analysis

Lexical analysis is the process of converting a sequence of characters into a sequence of tokens while syntax analysis is the process of analyzing a string of symbols either in natural language, computer languages or data structures conforming to the rules of a formal grammar.

What is the Difference Between Lexical Analysis and Syntax ...

Syntax analysis is the second phase of the compilation process. It takes the tokens generated at the lexical analysis phase as input and generates a parse tree (syntax tree) as output. In this phase, the parse checks whether the expressions made by the tokens are syntactically correct or not. Thus, this is also called parsing.
