The eggs or cysts of some parasites are very resistant to disinfection and will persist in the environment for a very long time. Examples of these are roundworms and coccidia. Other parasites, such as *Giardia* and *Trichomonas*, are quite fragile in the environment and are easily destroyed by most disinfectants as well as by drying. References:

Intestinal Parasite Control Guidelines - University of ...

In small-animal practice, hookworms, roundworms, and whipworms are commonly encountered intestinal parasites in canine and feline patients. They each have a unique life cycle, and their prepatent period, the time in which they infect a host before laying eggs, may range from 14-21 days in hookworms, 14-30 days in roundworms, to as long as 74-90 days in whipworms.
