Genomic imprinting, process wherein a gene is differentially expressed depending on whether it has been inherited from the mother or from the father. Such "parent-of-origin" effects are known to occur only in sexually reproducing placental mammals. Imprinting is one of a number of patterns of inheritance that do not obey the traditional Mendelian rules of inheritance, which assume ...

Genomic imprinting is an epigenetic phenomenon that causes genes to be expressed in a parent-of-origin-specific manner. Genes however, can also be partially imprinted. Partial imprinting happens when alleles from both parents are differently expressed rather than complete expression and complete suppression of one parents allele. Forms of genomic imprinting have been demonstrated in fungi ...
