Unit Circle Project. The goal of this project is to help you become very familiar with the unit circle, its angles and values. You are to use any method you choose to design a unit circle. It must include the degree, radians, sine and cosine values for 0° , 30° , 45° , 60° and 90° and their corresponding angles in the remaining quadrants.

Label the unit circle axis (-1 and 1's) and the trig graph x-axis (0degs to 360degs). Do not yet label the y-axis. Use a piece of spaghetti to mark a the unit distance from the origin at 15degs to the x-axis. Stick it down and label the angle. Take another piece of spaghetti and measure the y-coordinate ($\sin(x)$) of the point on the circle.

Mr. Unit Circle is a handheld tool about the size of a book that allows students to swing a hand around a pivot point in the middle of a circle overlaid onto a coordinate plane system. It is intended to help students visualize the multiple relationships that exist between angles on the unit circle and lengths on the coordinate plane.
