The best-known rat species are the black rat (*Rattus rattus*) and the brown rat (*Rattus norvegicus*). This group, generally known as the Old World rats or true rats, originated in Asia. Rats are bigger than most Old World mice, which are their relatives, but seldom weigh over 500 grams (17 1/2 oz) in the wild. The term rat is also used in the names of other small mammals that are not true rats.

The only source for this I can find is a book by Robert Sullivan called Rats, the same source Snopes used. Oddly I can't find any newer attempts at quantifying the actual NY rat population in any even semi-scientific source. Just a lot of articles all saying estimates vary or city officials estimate, etc. Has there been no better study since then?
